

HILO

HILLSDALE - LAKE OSWEGO REGIONAL TRAIL

To Lake Oswego

4.3 miles

Follow the HI-LO trail signs leading south over the stone bridge. Stay on the trail as you cross Maplecrest Dr to a HI-LO sign directing you toward 11th Dr. Proceed on 11th to Arnold St. Stay on Arnold for roughly 200 yards and descend the stairs to the next map.

To Hillsdale

2.0 miles

Turn right and follow the signs along the trail uphill to Taylor's Ferry Rd. Use the crosswalk on Taylor's Ferry to 17th where you will find the next map.

Welcome to the HI-LO Trail

The HI-LO trail is a 6.3-mile walk between Hillsdale and Lake Oswego. You'll encounter forests, restored wetlands, a waterfall, and spectacular views. Parts of the trail pass through residential areas, so be careful when crossing roads. You'll find cafés and eateries along the way.

Things to see in Marshall Park

Winter cascade

Park bridge

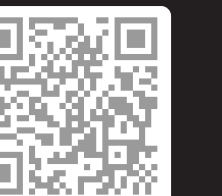

Exposed sediment layers

Pileated woodpecker

A Deeper Look

Willamette Meteorite

The Willamette Meteorite landed on a glacier in Montana, Idaho or Canada during the last ice age about 15,000 years ago. During one of the great Missoula Floods the ice the meteorite rested on became an iceberg and floated to the Willamette Valley near West Linn. The Missoula Floods occurred when ice dams holding back a huge lake in western Montana broke sending huge waves of water across the land. The floods eroded a large part of Eastern Washington and areas further east and deposited fine sediments and icebergs carrying erratics (boulders) to the Willamette Valley.
